VOLUME 4 NUMBER 4 | FALL 2014

THE FUTURE OF PHILANTHROPY

The generosity of visionary philanthropists has transformed the face—and name—of Sanford-Burnham Medical Research Institute throughout our 38-plus-year history.

Our supporters' contributions have enabled our scientists to achieve breakthrough discoveries and pioneer treatment strategies to improve the quality of life for those impacted by illness. We can never thank them enough for their unwavering support of our quest, From Research, the Power to Cure.

This past spring, we were thrilled to meet some of the new faces inspired by our science and the generosity of our past benefactors. They are the next generation of philanthropists, and they are already making a difference in their communities.

The Cambridge School

Students from The Cambridge School in San Diego, Calif., voted Sanford-Burnham as the recipient of funds raised to honor a teacher currently undergoing treatment for breast cancer.

The middle-school students made and

Sixth-grade student Jacqui Giles, and her mother, Suzanne Giles, with the bracelets The Cambridge School's students sold to raise funds for breast cancer research.

sold bracelets before choosing to gift the money they raised to Sanford-Burnham to advance breast cancer research.

"The students wanted to donate to a place

they believed was making major progress in finding solutions for cancer," said Melissa Gingrich, a teacher at The Cambridge School who oversaw the fundraiser. "They chose Sanford-Burnham because of the researchers' dedication to understanding all aspects of cancer—and their commitment to creating better treatments for cancer patients."

Benjamin School students excitedly present their gift to Sanford-Burnham's Diabetes and Obesity Research Center.

The Benjamin School

Students from The Benjamin School in North Palm Beach, Fla., designated Sanford-Burnham as the recipient of funds raised as part of a philanthropy education program.

The students worked closely with their teacher and a local financial ambassador to learn the mechanics of philanthropic giving—including essential skills for understanding and interpreting nonprofit tax documents and industry ratings, as well as learning about the importance of advocacy and charitable giving in their communities.

The students applied their new knowledge to finding an organization where their gift could make a positive impact.

"They picked Sanford-Burnham because they were excited about the future of medicine after hearing firsthand about the advancements happening in Florida," said Mary Ditaranto, the students' teacher.
